### Notre-Dame: Massive fire ravages Paris cathedral

🕒 16 April 2019    

Notre-Dame fire

There were gasps from the crowd at the moment Notre-Dame's spire fell

A major fire has engulfed the medieval cathedral of Notre-Dame in Paris, one of France's most famous landmarks.

The 850-year-old Gothic building's spire and roof have collapsed but the main

Just days after a fire ravaged [Notre-Dame de Paris](#) on April 15, 2019, France's then-prime minister Édouard Philippe [announced](#) plans for an international competition to design a new, more modern spire “suited to the techniques and challenges of our time.”

Though not everyone supported the initiative, [architects](#) from all over the world made quick work of sharing their innovative ideas. Some imagined

But those architects will have to bring their inventive designs to life elsewhere. As artnet News [reports](#), the French Senate recently passed legislation mandating that the cathedral be restored to its “last known visual state.” President Emmanuel Macron released a statement endorsing the decision and explaining that city officials would look to add a “contemporary gesture” in the “redevelopment of the surroundings of the cathedral” instead.

Though the 800-ton, 305-foot-tall spire was certainly one of Notre-Dame’s most striking features, it wasn’t actually part of the original building. The first spire, constructed between 1220 and 1230, began to deteriorate after several centuries, and it was removed in the late 1700s. The cathedral went spire-less until 1859, when builders completed work on architect Eugène Viollet-le-Duc’s new design—which, [according to Popular Mechanics](#), wasn’t an exact replica of the original.

Fun fact: Notre Dame was a ruin for centuries, of no interest to the Catholic Church or any of the various French governments to come and go, until the Victor Hugo novel made it a tourist destination and basically a theme park. Its value in the modern era is quite literally measured in tourist Euros.

‘COLLAPSE!’ will explore the imminent nature of the Anthropocene through the lense of ubiquity as the production of data, raw material, logistical processes and its impacts on contemporary scenes.

Using **Climate-Fiction (Cli-Fi)** as a vehicle, imminent realities will be researched, experimented with and projected across various cities around the world.

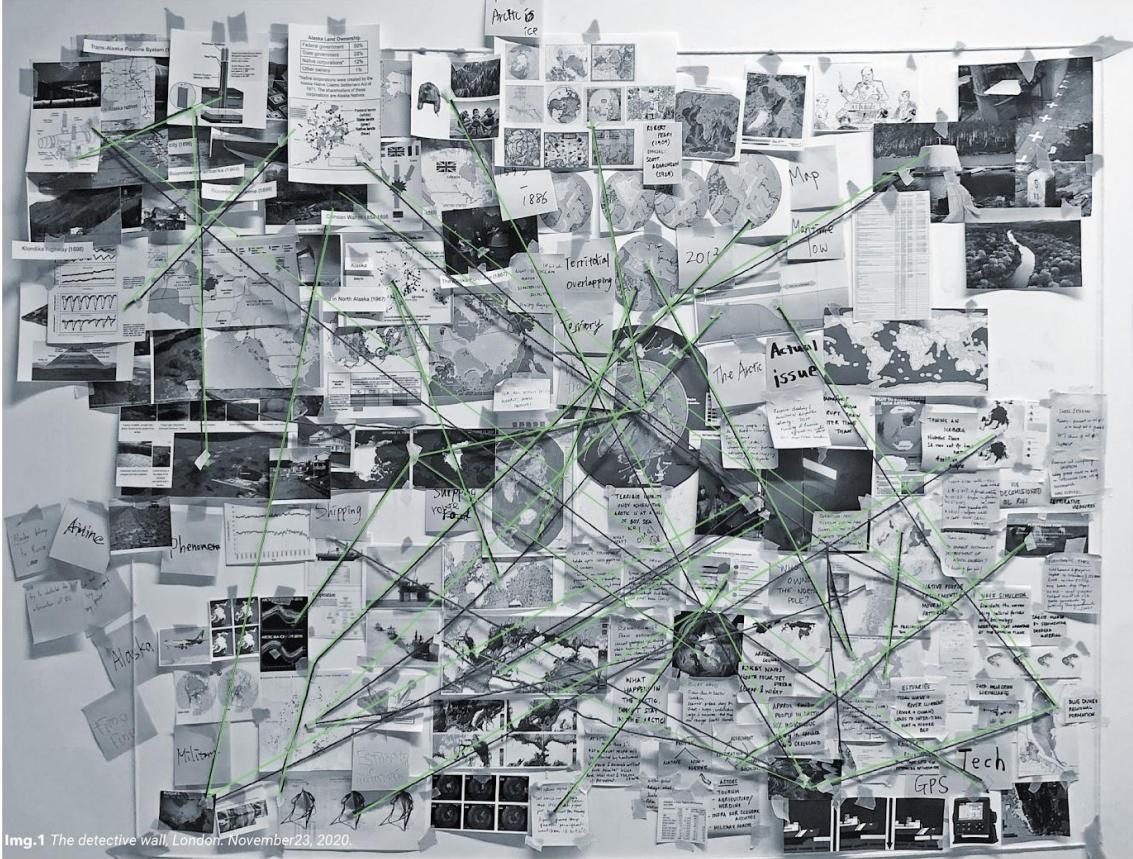

**Some questions the workshop will investigate are:**

- What cities are currently or expected to be under threat due to current trends?
- What are elements that should be preserved?
- What are methods of consensus making?
- What effects will this have on architectural production, habitation and its environment?
- What role(s) will ubiquitous data and sentience play?
- What models of mitigation, resistance and acceptance will result, and from who/what?
- How will these experiences be felt and through what mediums?

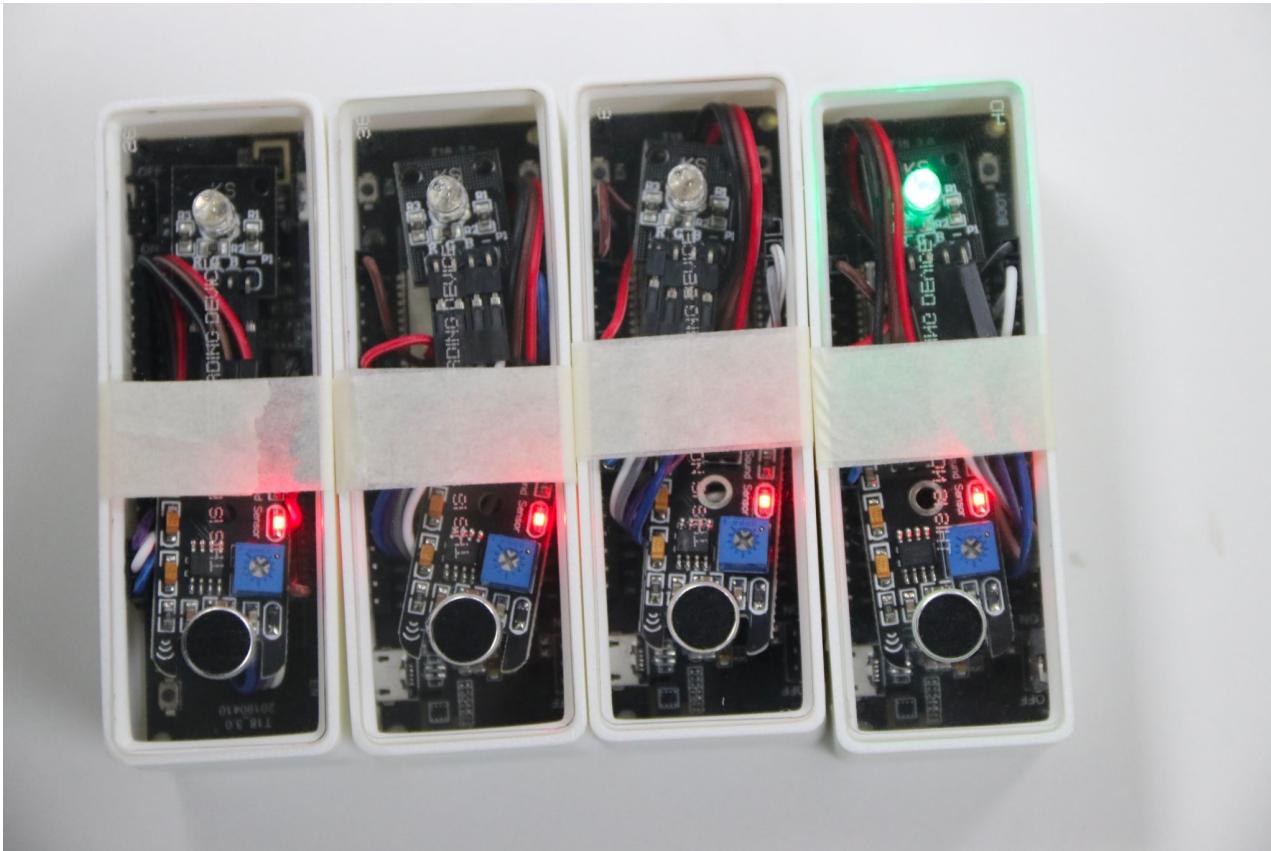

# Methodology

- **Decoding**
  - Identification of elements, spaces, identity, behaviors to be preserved.
    - Research into a given topic
    - Collect Sensing data
    - Building up the environment to explore
    - Identification of elements to preserve
- **World Building**
  - Building, experiencing and evaluating the tested outcomes
    - Interactive virtual environment for creating a living archive. -- (*Unreal*)
- **Story Telling**
  - Scene development and narrative building into a short movie to recount a future story. -- (*Blender and/or Unreal w/ Premiere Pro and After Effects*)
